

Web Engineering & Development (SWE 363)

## 3.1 Intro to CSS

**Created by: Dr. Omar Hammad**

**Lectured by: Dr. Khadijah Al Safwan**

## Announcements

- Reminder of the projects submissions
- SWE 363 Midterm date: Tuesday, November 4th
- Github submission issues - useage of templates forks

# In today's Lecture:

- Intro to CSS
- Basic Selectors
- Review project ideas

## Reference:

- Zybook: 3.1 to 3.3

<https://www.apple.com/>

<https://htmlcheatsheet.com/css/>

## CSS Rule

```
p { color: red };
```

# More rules

```
p {  
    color: crimson;  
    font-size: 16px;  
    line-height: 1.5;  
}  
h1 {  
    color: navy;  
    font-weight: 800;  
    text-transform: uppercase;  
    letter-spacing: 2px;  
}  
ul {  
    color: forestgreen;  
    font-weight: normal;  
    list-style-type: square;  
}
```

# Where to put it ?

```
<!-- inline -->  
<p style="color: red; font-size: 16px;">This is a paragraph</p>
```

```
<!-- internal -->  
<style>  
  p { color: red; font-size: 16px; }  
</style>
```

```
<!-- external -->  
<link rel="stylesheet" href="styles.css">
```

# Who wins?

who wins?

**The more specific wins**

## Activity: What will the color of each sentence be?

```
<style>
p    { color:orange; }
span { color:green; }
</style>

<p>
  Part of this sentence is orange,
  <span>while the rest is green.</span>
</p>

<p>
  Part of this sentence is orange,
  <span style="color:blue">while the rest is blue.</span>
</p>

<p style="color:red">
  This sentence is red.
</p>
```

## But !important overrides everything

```
<style>
p    { color:orange !important; }
span { color:green; }
</style>
<p style="color:red">
    This sentence was red. But orange overrides it.
</p>
```

# How can we select elements?

analyze the following code and tell what is the selection pattern

- tag: p, span, h1, div
- id: #main
- class: .highlight
- group: p, span, h1, div
- universal: \*

Activity: Analyze the following code and tell what is the selection pattern

```
<style>
  #main { color: red; }
  .highlight { color: blue; }
  p { color: green; }
  span { color: yellow; }
  h1 { color: purple; }
  div { color: orange; }
  * { color: black; }
  p, span, h1, div { color: brown; }
</style>
```

```
<div>
<h1 id="main">This is a heading</h1>
<p>This is a paragraph</p>
<p class="highlight">This is a highlighted paragraph</p>
<h2 class="highlight">This is a highlighted paragraph</h2>
</div>
```

# A bit advanced selectors

decendant, pseudo-class

- decendant: `p span`
- pseudo-class: `:hover`

Activity: Analyze the following code and tell what is the selection pattern

```
<style>
  p { color: blue; }
  p span { color: red; }
  button:hover { color: green; }
</style>
```

```
<div>
  <span>there</span>
</div>
<p>
  Hello <span>there</span>
</p>
<button>Click me</button>
```
